

# Integrated Campus Administration System

Modular, flexible and integrated

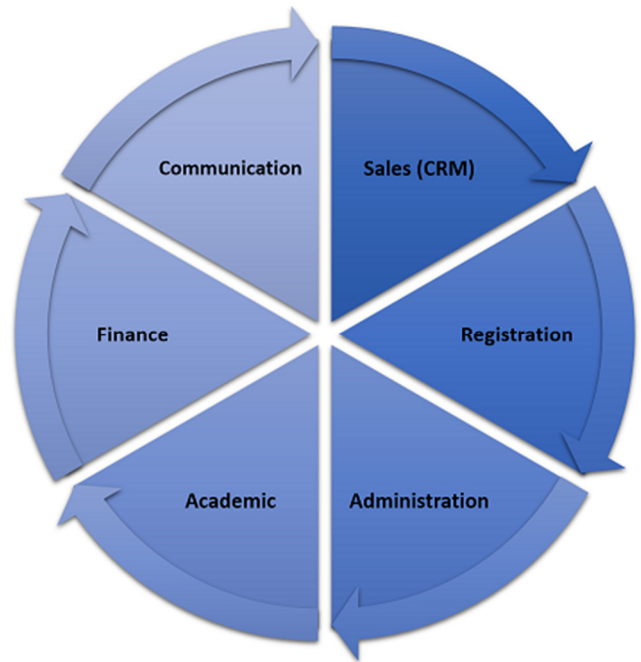

ICAS® is a holistic campus and student administration system that manages the student from enquiry to registration, through to graduation and beyond.

Increase your college, university or school's efficiency and staff productivity with ICAS®.

Designed in conjunction with industry experts, ICAS® optimises workflow and co-operation between your administration, academic, finance and sales functions with one reliable and easy-to-use solution.

ICAS® is a complete campus solution with a modular design that is easy to implement. Each module can be activated depending on your requirements, allowing you to shape and build your own fully integrated education management system.

Improve the security of your information and comply with the Protection of Personal Information (POPI) Act through managing user accessibility and controlling user access to confidential information. Streamline and automate your processes, improving efficiency, while reducing potential debt with the ICAS® finance modules.

## Features and Benefits

- Increase sales
- Reduce bad debt
- Improve efficiency
- Manage resources
- Increase security of information
- Automatically calculate results
- Regulatory upload templates
- Hundreds of reports
- SMS and email
- Minimal data usage
- Integrated with main SA banks
- Integrated with main Accounting Systems
- Available 24/7
- Helpdesk Support

With its integrated and modular design, ICAS® suits any size of College, School or Corporate Training Provider.

**THE COMPLETE SOLUTION FOR EDUCATION MANAGEMENT**

## Improve your Sales

Effective sales and marketing is central to the growth of any college. The ICAS® Sales (CRM) module supports your sales staff as they build relationships with prospective students and set-up after-sales calls or meetings. On a management level, the sales module includes a management view, providing a centralised overview of daily sales activities, as well as providing a report to assist with tracking and monitoring lead sources, enabling you to monitor your return on marketing investment (ROMI).

## Automate your registration process

Student registration is a vital step within any college, as you collect a student's biographical and account payer information, while ensuring that the student meets the qualification requirements. Convert leads to registered students and quotes to invoices quickly and timeously while you create and manage class and attendance lists.

## Integrate your administration

Administration is central to the daily running of a college. Plan and manage your academic structure for one, or a group of colleges, taking into consideration each campus, qualification or programmes offered, full-time and part-time courses and students, the various subjects offered, the duration of each subject, as well as the numerous student fee structures.

Increase the security of your information through the user profile management module, controlling the accessibilities of your users. Pull information from anywhere in the ICAS® database using a wide variety of layouts, fields, report logic, formatting and data selection. Choose from a host of standard reports, manipulate existing reports or create new ones that pinpoint the information you need. Then, publish reports in a variety of file formats, including HTML and PDF.

## Streamline your academic process

Save your academic staff time, while reducing their end of semester frustrations by automating your results and weighting calculations. The results module enables you to instantly know who passed, failed or qualifies for a supplementary. Also, create, manipulate and update timetables with a click of a button.

## Consolidate Finance and Reduce Debt

Specifically designed for finance within the education industry and integrating with major South African banks and the main accounting systems to ensure a complete offering. The ICAS® Finance module assists with reducing the risk of student debt. With debt collection functions, debit order processing and tools for debt age analysis, as well as a full set of financial reports, all finance functions are consolidated within one system.

## Keep in-touch

The increased popularity of social media and usage of smartphones has changed the way that people communicate. The ICAS® Communication module enables you to stay in-touch with your students, both current and past (alumni) through multiple communication channels.
